## Minutes from Previous Meeting

As we have our front-end & back-end application set up, this scrum meeting focuses on assigning group members (to those who are available to work now) the implementation of the user interfaces from project 2. By the time of our next scrum meeting, we should have a semi-functional kiosk that emphasizes database changes after ordering, a login page with functional permission access (i.e some pages are restricted to managers only), and a menu board that displays all current menu items. As emphasized, some of our members were busy with exams, so we decided to leave the assignment of their tasks towards the next scrum meeting.
